ML model: Bullish over 5 trading sessions — probability of a rise 63%, expected price ≈ 3021.99. Backtested directional accuracy: 52.1%. This is close to chance, so treat the signal as weak.

Risk (Medium): Annualized volatility over the last year is 20.3%. Maximum drawdown over the last year was -32.9%. Historical 1-day 95% Value-at-Risk is 1.99% of position value. RSI indicates oversold conditions; momentum is weak.

Conclusion: the signals are **mixed** (ML model: bullish, technicals: bearish), so there is no clear short-term edge. Risk level: Medium. This is probabilistic, not a recommendation, and can change quickly with new information.
