ML model: Bullish over 5 trading sessions — probability of a rise 61%, expected price ≈ 978.46. Backtested directional accuracy: 50.0%. This is close to chance, so treat the signal as weak.

Risk (Medium): Annualized volatility over the last year is 23.7%. Maximum drawdown over the last year was -23.5%. Historical 1-day 95% Value-at-Risk is 2.20% of position value. Historical directional accuracy is only 50%, close to chance.

Conclusion: the signals are **mixed** (ML model: bullish, technicals: bearish), so there is no clear short-term edge. Risk level: Medium. This is probabilistic, not a recommendation, and can change quickly with new information.
